### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

In view of applicant's arguments, see pages 6 through 8 of 11, filed 05/04/2007, with respect to claim 1 have been fully considered and are persuasive. The rejection(s) of claims 1-4 indicated in the prior Office action each have been withdrawn.

Applicant's arguments directed to claim 1 such that structural limitation of "the interface surface in the region of the catch is located axially behind the interface surface in the region of the barb" is not met by Eaton. Further more, the limitation is not met in view of the further requirement of the interface surface "abutting the corresponding interface surface of the other part when the clasp is fastened". Eaton's corresponding interface surface of the other part cannot be interpreted to be the section behind barb 76 since the interface surface of one part cannot abut the interface surface of the other part, where the abutting interface surface of the other part is ahead of barb 76. Additionally, applicant's argument that Eaton does not meet the limitation of "the interface surfaces are arranged to slide over each other to separate the two parts when the barbs are released from the catches."

Therefore, claims 1 through 5 are in condition for allowance. All objections and rejections indicated in the prior Office action each have been withdrawn.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
